

Ebb Concept (with custom granite countertop) at Kauffman Baseball Stadium

THE POSSIBILITIES ARE ENDLESS FOR THE EBB® CONCEPT DESIGN

Neo-Metro takes the drawings from architects and designers and executes their visions from sketch to final product. Industrial-gauge, recycled stainless steel offers infinite possibilities to create a wide range of luxurious looks for every discerning taste. From there, we can custom-cast to any size or hues of resin, powder coat our steel to match any Pantone color, provide a variety of finishes, and fit any size expectation.

Neo-Metro's installation at the Kauffman Baseball Stadium is yet another testimonial to our mix and match

capability, and proof of the Ebb Concept's endless possibilities for design.

HOK Architects in Kansas City, Missouri, worked with Neo Metro and local rep firm Hebco to create a one-of-a-kind look for the stadium's 24 custom wall-mounted Ebb Concepts, located in each of its luxury suites. Neo-Metro provided 9110 satin frames, 3673 shallow satin Ebb Basins, and MC-FLR carrier system, but worked with a local stone fabricator to fit a 36-inch granite countertop specific to the architect's vision.
